## **RALLYBACK**

### OPTIMALITY TESTS FOR $\hat{\theta}_1$ AND $\hat{\theta}_2$

$$\begin{aligned} & \text{OPTIMALITY TEST FOR } \hat{\theta}_1 \\ & \text{OPTIMALITY TEST FOR } \hat{\theta}_2 \end{aligned}$$

It is of interest to know whether the estimates  $\hat{\theta}_1$  and  $\hat{\theta}_2$  are optimal. The following two theorems give necessary and sufficient conditions for the optimality of  $\hat{\theta}_1$  and  $\hat{\theta}_2$  respectively. The proofs of these theorems are given in the Appendix.

### OPTIMALITY TEST FOR $\hat{\theta}_1$

$$\text{OPTIMALITY TEST FOR } \hat{\theta}_1$$

Let  $\hat{\theta}_1$  be the estimate of  $\theta_1$  obtained by the method of moments. Then  $\hat{\theta}_1$  is optimal if and only if

$$\frac{\partial \hat{\theta}_1}{\partial \theta_1} = \frac{\partial \hat{\theta}_1}{\partial \theta_2} = \frac{\partial \hat{\theta}_1}{\partial \theta_3} = \frac{\partial \hat{\theta}_1}{\partial \theta_4} = 0$$

$$\text{OPTIMALITY TEST FOR } \hat{\theta}_2$$

Let  $\hat{\theta}_2$  be the estimate of  $\theta_2$  obtained by the method of moments. Then  $\hat{\theta}_2$  is optimal if and only if

$$\frac{\partial \hat{\theta}_2}{\partial \theta_1} = \frac{\partial \hat{\theta}_2}{\partial \theta_2} = \frac{\partial \hat{\theta}_2}{\partial \theta_3} = \frac{\partial \hat{\theta}_2}{\partial \theta_4} = 0$$

It is of interest to note that

$$\frac{\partial \hat{\theta}_1}{\partial \theta_1} = \frac{\partial \hat{\theta}_2}{\partial \theta_2} = \frac{\partial \hat{\theta}_1}{\partial \theta_3} = \frac{\partial \hat{\theta}_2}{\partial \theta_3} = \frac{\partial \hat{\theta}_1}{\partial \theta_4} = \frac{\partial \hat{\theta}_2}{\partial \theta_4} = 0$$

and that the condition  $\frac{\partial \hat{\theta}_1}{\partial \theta_2} = \frac{\partial \hat{\theta}_2}{\partial \theta_1}$  is not necessary for the optimality of  $\hat{\theta}_1$  and  $\hat{\theta}_2$ .
